MANUAL DE INSTRUCCIONES

construye tu propio robot interactivo

Dex es un robot interactivo fácil de construir!

Con los componentes podrás armar tu propio Dex en sólo una hora! Sencillo de ensamblar y desarmar con solo pegamento y un desarmador.

Control por Bluetooth

Fuertes motores

Sensor de sonido

Partes

Importante!

Antes de comenzar el armado, debes calibrar los motores a 90°

b

Tornillos punteagudos x4

Opción 2:

También puedes pegar los servomotores con UHU directamente a la base

pointed screw x2

pointed screw x2

b

Leer guía de programación

Importante:

Desconectar el Bluetooth si se desea subir un nuevo código al robot, de otro modo Arduino mostrará un error al subir el código a la placa.

Cómo recargar tus baterías

Se conecta al módulo cargador como se muestra en la figura, solamente se puede recargar una batería a la vez, una vez termines con una, desconectala y conecta la otra.

Sólo conectar las baterías al robot luego de subir el código y haber probado las conexiones, NO conectar a la vez las baterías y la computadora al robot!
